13L RF Electronic Single-Point Level Detection System with Integral Level Sensing Probe, 115 V, 36" Probe Length, Equipment Tagging - None

Low maintenance and low cost

The 13L system contains special shield driver circuitry to ignore the effect of conductive material buildup on the level probe surface.

Versatile relay configuration

A relay time delay feature prevents chatter in turbulent materials. The relay can be field-configured for a low or high level fail-safe operating mode.

Chemically-resistant components

The level probe is constructed of PFA and 316 stainless steel for use in a wide variety of corrosive and non-corrosive materials.

Detects virtually any material

Can be used in conductive and non-conductive liquids, granular materials, foams, pastes and slurries.

What's in the box?

Includes: level controller, level sensor and user manual
