

Light chamber 750L, solid

- Accurate control of three parameters - Temperature above and below ambient, relative humidity and light - provide great environment in testing applications and for biological research with plants and animals. Choice of ICH module provides capability for efficient ICH light testing in Pharma.
- Uniform Temperature / relative humidity / light exposure for samples.
- Energy-efficient Peltier technology supports temperature stability and uniformity with lower energy usage compared to traditional compressors and without hazardous refrigerant.
- LED light system provides specified light exposure on 1, 2 or 3 shelves; programmable to adapt light quality / intensity and on/off timing - e.g. for day-night cycles. Choose from two light modules (ordered separately)
