

TSX CHROMA 45cf 120v/60hz

Thermo Scientific™ TSX Series high-performance chromatography refrigerators are designed for a variety of applications requiring precise temperature control, full access to chromatography instrumentation, and easy setup of instrumentation and apparatus within the chamber. The Series' V-drive technology is designed to provide temperature uniformity that continually adapts to user patterns and offers significant energy savings without compromising protection.

The TSX Chromatography series features industry-leading safety features to ensure maximum protection as well as delivering over 450W of reserve capacity to handle the heat load generated by instruments within the cabinet and to react quickly to frequent door access.
